A method, apparatus, and computer program product are disclosed to create media mixes and summaries using crowd-sourced intelligence. In the context of a method, sensor and context data is received from at least one device. The method includes causing generation of a media remix based on the sensor and context data received from the at least one device. In addition, the method includes causing transmission of the media remix to a client device. In some embodiments, the sensor data from the at least one device comprises at least one selected from the group consisting of: orientation with respect to north; orientation with respect to horizontal; position in three dimensional space; GPS data; or location data, and the context data from the at least one device enables calculation of the depth of focus of the at least one device. A corresponding apparatus and computer program product are also provided.
